#### Step #1: Prep

Straighten cable. Use RDCUTTER-S, applying even pressure around cable while rotating tool around cable to cut off cable squarely.

Proper prep is achieved when center conductor is chamfered as shown.

Attach prep/strip tool to drill. Be sure you are using an SP-14S tool.

Use center conductor cleaner ("SP-CC tool") to remove any remaining dielectric material on center conductor.

Actuate drill to remove jacket and expose the center conductor. Then remove cable from tool.
